

Virtual Keyboard 2.4

Last modification: 03/01/2009
 Author: BIARD Nicolas, Plate-Forme Nouvelles Technologies - Hôpital Raymond Poincaré
 Approximate price: 10€
 Type: Software

Virtual keyboard is a text processing help software.

System requirements :

Operating system : Mac only. Requires Mac OS X 10.2 or higher.

(A previous version is still available for Mac OS 9 and earlier versions of Mac OS X)

Functions :

Typing mode : click only.

Cells content : letters, functions (no settings about the cells content).

Speech : reads written text and selected letters.

Advantages :

Transparency technology that automatically shows and hides the keyboard as needed.

Ergonomic.

Shortcut expansion that allows to type a sentence or a word saved before.

A text processing window, retractable, is included with Virtual Keyboard.

Provides access to Mac OS X. Works with the Mac speech system.

The price.

The keyboard always floats above other applications, and allows the change of application

Disadvantages :

No word prediction.

You cannot create your own keyboard, and the only way to change it is to change the preferences of Mac OS X, which makes the personalization of the keyboard very difficult.

The only way to have access to Virtual Keyboard is by clicking : you cannot use self click, nor scanning.

You cannot set the font : its size automatically fits the size of the window.

The buttons to minimize and maximize the keyboard or the text area are too small.
